

About Authorship

Authorship is an explicit way of assigning responsibility and giving credit for intellectual work. The two are linked. Authorship practices should be judged by how honestly, they reflect actual contributions to the final product. Authorship is important to the reputation, academic promotion, and grant support of the individuals involved as well as to the strength and reputation of their institution. Disputes sometimes arise about who should be listed as authors of an intellectual product and the order in which they should be listed. When disagreements over authorship arise, they can take a substantial toll on the good will, effectiveness, and reputation of the individuals involved and their academic community. Many such disagreements result from misunderstanding and failed communication among colleagues and might have been prevented by a clear, early understanding of standards for authorship that are shared by the academic community as a whole.

AIFPU Journal of school of Science and Technology do not require all authors of a paper to sign the letter of submission and will not impose an order on the list of authors. Submission to Journal is taken by the Editors to mean that all the listed authors have agreed on all of the contents. The corresponding (submitting) author will be responsible for having ensured that this agreement has been attained and for managing all correspondence between the journal and all coauthors, before and after publication. Any change to the authors list after submission, such as a change in the order of the authors or the deletion or addition of authors needs to be approved by a signed letter from every author.

Minimum Requirements for Authorship

All persons designated as authors should qualify for authorship, and all those who qualify should be listed. Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. One or more authors should take responsibility for the integrity of the work as a whole, from inception to published article. Authorship credit should be based only on substantial contributions to conception and design, or acquisition of data, or analysis and interpretation of data and final approval of the version to be published

Acquisition of funding, the collection of data, or general supervision of research group, by themselves, do not justify authorship. Authors should provide a description of what each contributed, and editors should publish that information. All others who contributed to the work who are not authors should be named in the Acknowledgments, and what they did should be described.
